Cyber Security Landscape

In today's digital age, everybody face an increasing number of cybersecurity threats that evolve rapidly. Cyberattacks can cause significant financial losses, damage to reputation and regulatory penalties. Therefore, proactive cybersecurity measures are no longer optional they are essential.

The cybersecurity landscape is more complex than ever, with threats like ransomware, phishing and data breaches targeting businesses, industries and peoples with valuable data of all sizes, making a strong cybersecurity posture crucial.

Our Solution

ARCHANGEL® 2.0 Next Generation Firewall

is a very sophisticated protection system, much more than simple peripheral protection: It protects in depth against any attack coming from the outside as well as against those coming from within the private network.

Fundamental principles

Zero Trust

A security model that requires strict verification of every user and device attempting to access resources, regardless of whether they are inside or outside the organization's network.

Micro Segmentation

A strategy that involves dividing a network into smaller, isolated segments to minimize the attack surface and limit lateral movement within the network.

Interdiction Rule

A security measure that proactively disrupts or prevents malicious activities or communications by identifying and blocking specific behaviors or threats before they cause harm.

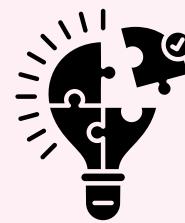

Why choose Archangel?

Most organizations lack the resources and diversified skills to find hidden vulnerabilities before attackers do. Unfortunately, using reactive tools alone leads to noisy, low-impact results that miss emerging risks.

24/7 threat monitoring

Customized security solutions

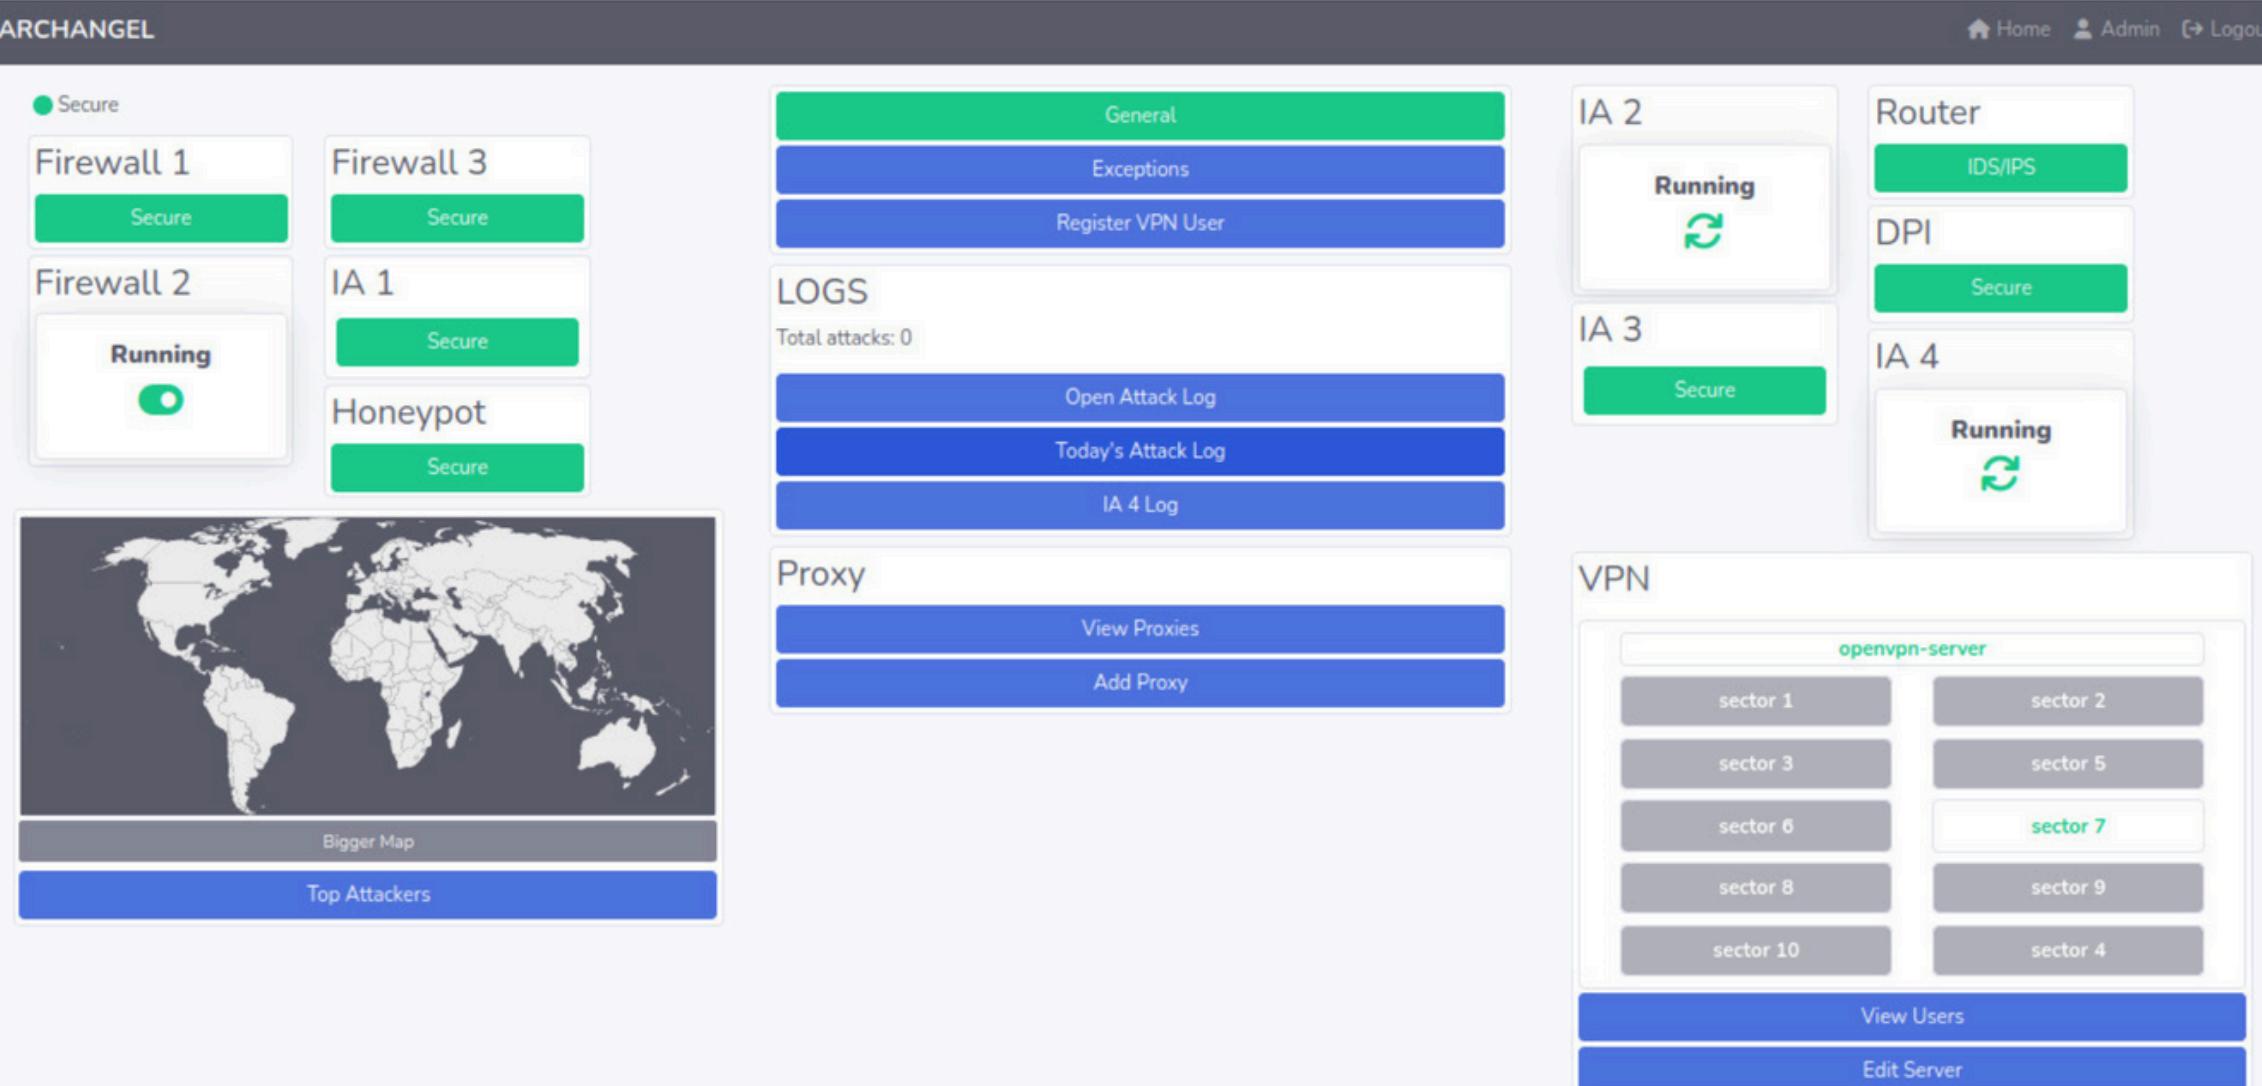

Comprehensive Security Service

Features of Archangel NGFW

- Network Protection
- Threat Protection
- VPN
- Networking

- Application Control
- Traffic Scanning
- NIDS / HIDS / IPS / DPI
- Reporting

The screenshot displays the Archangel NGFW web-based management interface. The top navigation bar includes links for Home, Admin, and Logout. The main content area is organized into several sections:

- General:** Includes buttons for Register VPN User, General, and Exceptions.
- Logs:** Shows a total of 0 attacks and links to Open Attack Log, Today's Attack Log, and IA 4 Log.
- Proxy:** Includes View Proxies and Add Proxy buttons.
- VPN:** Shows an openvpn-server with sectors 1 through 10. Sector 7 is highlighted in green. Other buttons include View Users and Edit Server.
- Firewall:** Shows Firewall 1 and Firewall 2 as secure, and Firewall 3 as secure.
- Intelligence:** Shows IA 1, IA 2, IA 3, and IA 4, with IA 2 and IA 4 marked as running.
- Router:** Shows Router, IDS/IPS, and DPI, with IDS/IPS marked as secure.
- Networking:** Shows a world map with network connections and links for Bigger Map and Top Attackers.
